

How to Care For Your Sanitary Sewer Pipes and the New Community Central Sanitary Sewer System

Sanitary sewer systems are designed to handle three types of waste products:

Used Water

Human Body Waste

Toilet Paper

***NOTHING ELSE SHOULD ENTER THE SEWER SYSTEM WHETHER THROUGH
A COMMUNE OR SINK DRAIN.***

Examples:

- ✓ Don't pour grease, fats and oils from cooking down the drain. These items can harden and block pipes. This includes sour milk. One liter of full cream milk has enough fat in it to cover the surface of an Olympic sized swimming pool!
- ✓ Don't flush wipes of any kind, this includes "FLUSHABLE WIPES", paper towels, and rags.
- ✓ Don't use the sewer to dispose of food scraps including tealeaves, coffee grounds, eggshells etc.
- ✓ Don't use the toilet as a wastebasket for garbage such as feminine hygiene products, dental floss, hair, band aids, Q-tips, tooth picks, kitty litter, cigarette butts, etc.
- ✓ Don't flush or pour chemicals such as pharmaceutical products, nail polish remover, paints, pesticides etc. down the drain. Chemicals can corrode sewer pipes. Flushed unwanted medications can pass through the treatment process intact and remain in the environment.
